

RTD21 series from Tempotech Controls, featuring a threaded nozzle design, is commonly used for measuring the temperature of an injection molding machine nozzle. This style does not come into direct contact with molten plastic. Due to its compact size, it is also suitable for use in other applications with limited space, such as mounting in bearing housings, sealing bars, and heat plates. Custom elements with different materials, values, and tolerances are available upon request for specific needs.

Key Features

- Available in type Pt100,Pt1000.
- Available in Class B, Class A (IEC 60751& ASTM E1137)
- Single and Duplex Sensor elements.
- Range -50°C to 510°C (-58°F to 1,112 °F)
- Standard bolt size 1/4"-20 & M6 X 1.75 custom option available
- TEFLON (200°C and Fiber Glass wire 480°C with SS braiding and Armours available

Technical Specification

Insulation Resistance: 100 MG Ohms @ 250 vdc

Response Time: <5 Sec in circulating water @ 3ft/sec

Accuracy: As per IEC60751 (See tolerance chart)

Self Heating Error: < 0.30°F (0.17°C)

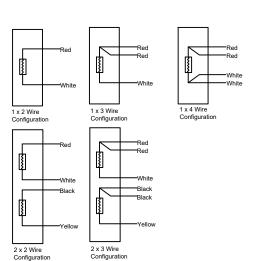

Time Constanat: < 5 sec

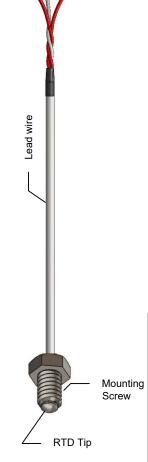

RTD Wire Configuration

2 Wire: In 2 wire RTDs, one lead wire is connected to each wire of the RTD element. 2 Wire RTDs are an economical option for the applications where high accuracy is not required. Since there is no compensation wire, the accuracy of RTD can be affected if long lead wire is used.

3 Wire: 3 wire RTDs are the most common type of RTDs used in the industry. In 3 three-wire Rtd 1 wire is connected to the one side of the RTD element, and on the other side, 2 wires are connected to compensate for the resistance. With compensating wire, accuracy is very close to the element accuracy at the termination end.

4 wire: 4 wire RTDs are highly accurate. In 4 wire RTDs 2 wires are connected to each side of the RTD element. With additional wire on each side of the RTD element, the output at the termination is highly accurate. 4 wire RTDs are recommended where high accuracy and long lead wire is required.

For 1/10 DIN B RTD is not standardize. The only accuracy defined is 1/10 of Class B accuracy at $0^\circ = 0.03^\circ C$
